

Political Theory of Our Planetary Future: A Blueprint for a Sustainable and Just World

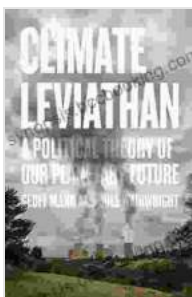

In the face of unprecedented environmental degradation and social inequality, the world desperately needs a new political theory—one that can guide us towards a sustainable and just future for all.

Political Theory of Our Planetary Future is a groundbreaking work that offers just such a theory. Written by a team of leading political theorists, this book provides a comprehensive analysis of the challenges facing our planet and proposes a transformative vision for how we can overcome them.

- **Interdisciplinary approach:** Drawing on insights from political science, economics, ecology, and ethics, the book provides a holistic understanding of the complexities of global environmental and social problems.
- **Global perspective:** The book adopts a global perspective, recognizing that the challenges facing humanity are interconnected and require collective action.
- **Radical critique of existing political systems:** The book argues that the current political and economic systems are fundamentally unsustainable and unjust, and proposes a fundamental rethinking of how we organize our societies.
- **Realistic and actionable solutions:** While acknowledging the urgency of the situation, the book also provides realistic and actionable solutions to the challenges we face.

- Planetary boundaries:** The book emphasizes the importance of respecting the Earth's planetary boundaries—the limits beyond which human activities cannot be sustained.
- **Ecological democracy:** The book proposes a model for political governance that gives voice to the interests of both humans and the natural world.
- **Global governance:** The book advocates for a strengthened system of global governance to address transnational environmental and social issues.
- **Climate justice:** The book argues that climate change is not only a scientific problem but also a social justice issue, and that the burden of climate change should be fairly distributed.
- **Sustainable development:** The book provides a comprehensive framework for sustainable development that balances economic, environmental, and social goals.
