Cluster was born in 1925 in a small town in Kansas. He showed an early interest in technology, and by the time he was a teenager, he was building his own radios and other electronic devices. After graduating from high school, Cluster attended the Massachusetts Institute of Technology, where he studied electrical engineering. After graduating from MIT, Cluster worked for several years as an engineer at Bell Labs. However, he soon became bored with the slow pace of corporate research and decided to strike out on his own.

In 1951, Cluster founded his own company, Cluster Electronics. The company initially focused on developing new types of electronic components, but Cluster soon became interested in the potential of computers. In 1956, he published a paper in which he predicted that computers would one day become as common as telephones. At the time, this was a radical idea, but Cluster was convinced that it would happen.

Over the next few decades, Cluster continued to develop new technologies, including many that are now taken for granted. He invented the first practical personal computer, the first word processor, and the first computer mouse. He also developed new technologies for networking, storage, and display. In 1979, Cluster published his book, *See Was Right*, in which he outlined his vision for the future of technology. In the book, Cluster predicted that computers would become increasingly powerful and affordable, and that they would eventually be used for everything from communication to entertainment to education. He also predicted the rise of the internet and the development of artificial intelligence.

Cluster died in 1999, but his legacy lives on. He is considered one of the most important figures in the history of technology, and his work has had a profound impact on the way we live today. *See Was Right* is a must-read for anyone who is interested in the future of technology.

What's in the Book?

See Was Right is a collection of essays and articles written by Cluster over the course of his career. The book is divided into four parts:

1. **The Future of Computing:** In this section, Cluster discusses his vision for the future of computers. He predicts that computers will become

increasingly powerful and affordable, and that they will eventually be used for everything from communication to entertainment to education.

2. **The Rise of the Internet:** In this section, Cluster discusses the potential of the internet. He predicts that the internet will become a global network that will connect people from all over the world. He also predicts the development of new technologies that will make it easier to access and share information online.
3. **The Development of Artificial Intelligence:** In this section, Cluster discusses the potential of artificial intelligence. He predicts that artificial intelligence will eventually be able to perform tasks that are currently impossible for computers. He also discusses the ethical implications of artificial intelligence.
4. **The Future of Society:** In this section, Cluster discusses the impact of technology on society. He predicts that technology will make the world a more connected and prosperous place. However, he also warns that technology could be used for evil purposes.

See Was Right is a fascinating look into the mind of a visionary who saw the potential of the digital age long before anyone else. The book is full of insights into the future of technology, and it's a must-read for anyone who is interested in the way that technology is changing the world.
